 Adversarial Design is a type of political design that evokes and engages political issues. In doing so, the cultural production of Adversarial Design crosses all disciplinary boundaries in the construction of objects, interfaces, networks, spaces and events. Most importantly, Adversarial Design does the work in expressing and enabling agonism.

Throughout this book, I have presented examples of adversarial design, including software that reveals the entanglement of military and university research programs, social robots that curse at one another, and umbrellas that counteract surveillance systems. Each of these illustrates how design can do the work of agonism.

Adversarial design fuses political issues with design techniques. Agonism (which promotes the positive types of conflict in society, such as debate) and difference of opinions are central to this type of design. In a democracy, healthy debate must be a constant component and adversarial design offers a fuel for this debate, by positing a provocative, mostly biased side of an argument. There ...

The task of adversarial design is to design things (goods, services, events, systems) that reveal the political qualities and implications of made world. and also offer new matenal conditions and experctences that enable divergent political affairs. The difficult aspect of adversarial design is that the work is never done.

An exploration of the political qualities of technology design, as seen in projects that span art, computer science, and consumer products. In Adversarial Design, Carl DiSalvo examines the ways that technology design can provoke and engage the political. He describes a practice, which he terms "adversarial design," that uses the means and forms of design to challenge beliefs, values, and what is taken to be fact. It is not simply applying design to politics-attempting to improve governance for example, by redesigning ballots and polling places; it is implicitly contestational and strives to question conventional approaches to political issues. DiSalvo explores the political qualities and potentials of design by examining a series of projects that span design and art, engineering and computer science, agitprop and consumer products. He views these projects—which include computational visualizations of networks of power and influence, therapy robots that shape sociability, and everyday objects embedded with microchips that enable users to circumvent surveillance—through the lens of agonism, a political theory that emphasizes contention as foundational to democracy. DiSalvo's illuminating analysis aims to provide design criticism with a new approach for thinking about the relationship between forms of political expression, computation as a medium, and the processes and products of design.

Exploring how design can be used for good—prompting self-reflection, igniting the imagination, and affecting positive social change. Good design provides solutions to problems. It improves our buildings, medical equipment, clothing, and kitchen utensils, among other objects. But what if design could also improve societal problems by prompting positive ideological change? In this book, Bruce and Stephanie Tharp survey recent critical design practices and propose a new, more inclusive field of socially minded practice: discursive design. While many consider good design to be unobtrusive, intuitive, invisible, and undemanding intellectually, discursive design instead targets the intellect, prompting self-reflection and igniting the imagination. Discursive design (derived from "discourse") expands the boundaries of how we can use design—how objects are, in effect, goods) for thinking. Discursive Design invites us to see objects in a new light, to understand more than their basic form and utility. Beyond the different foci of critical design, speculative design, design fiction, interrogative design, and adversarial design, Bruce and Stephanie Tharp establish a more comprehensive, unifying vision as well as innovative methods. They not only offer social criticism but also explore how objects can, for example, be used by counselors in therapy sessions, by town councils to facilitate a pre-vote discussions, by activists seeking engagement, and by institutions and industry to better understand the values, beliefs, and attitudes of those whom they serve. Discursive design sparks new ways of thinking, and it is only through new thinking that our sociocultural futures can change.

The Design Politics of the Passport presents an innovative study of the passport and its associated social, political and material practices as a means of uncovering the workings of 'design politics'. It traces the histories, technologies, power relations and contestations around this small but powerful artefact to establish a framework for understanding how design is always enmeshed in the political, and how politics can be understood in terms of material objects. Combining design studies with critical border studies, alongside ethnographic work among undocumented migrants, border transgressors and passport forgers, this book shows how a world made and designed as open and hospitable to some is strictly enclosed, confined and demarcated for many others – and how those affected by such injustices dissent from the immobilities imposed on them through the same capacity of design and artifice.

Through practices of collaborative imagination and making, or "doing design otherwise," design experiments can contribute to keeping local democracies vibrant. In this counterpoint to the grand narratives of design punditry, Carl DiSalvo presents what he calls "doing design otherwise." Arguing that democracy requires constant renewal and care, he shows how designers can supply novel contributions to local democracy by drawing together theory and practice, making and reflection. The relentless pursuit of innovation, uncritical embrace of the new and novel, and treatment of all things as design problems, says DiSalvo, can lead to cultural imperialism. In Design as Democratic Inquiry, he recounts a series of projects that exemplify engaged design in practice. These experiments in practice-based research are grounded in collaborations with communities and institutions. The projects DiSalvo describes took place from 2014 to 2019 in Atlanta. Rather than presume that government, industry—or academia—should determine the outcome, the designers began with the recognition that the residents and local organizations were already creative and resourceful. DiSalvo uses the projects to show how design might work as a mode of inquiry. Resisting heroic stories of design and innovation, he argues for embracing design as fragile, contingent, partial, and compromised. In particular, he explores how design might be leveraged to facilitate a more diverse civic imagination. A fundamental tenet of design is that the world is made, and therefore it could be made differently. A key concept is that democracy requires constant renewal and care. Thus, designing becomes a way to care, together, for our collective future.

Design is inextricably interwoven with all aspects of life and has even produced its own astonishing genre of research. Design research opens up new perspectives of interdisciplinary empiricism, joining with economics, sociology, technology, and philosophy to produce analyses and syntheses that get to the heart of daily life. The twelve contributions from international authors that comprise this book vividly make this case. They cover the relationship between subject and object, animation, all forms of representation, design activism, and many other themes. This book is intended to inspire discussion. Its target reader is anyone seeking to expand their understanding of design, to fundamentally improve their praxis, and to more deeply appreciate life in all of its aspects.

Design as Future-Making brings together leading international designers, scholars, and critics to address ways in which design is shaping the future. The contributors share an understanding of design as a practice that, with its focus on innovation and newness, is a natural ally of futurity. Ultimately, the choices made by designers are understood here as choices about the kind of world we want to live in. Design as Future-Making locates design in a space of creative and critical reflection, examining the expanding nature of practice in fields such as biomedicine, sustainability, digital crafting, fashion, architecture, urbanism, and design activism. The authors contextualize design and its affects within issues of social justice, environmental health, political agency, education, and the right to pleasure and play. Collectively, they make the case that, as an integrated mode of thought and action, design is intrinsically social and deeply political.

The Design of Innovation illustrates how to design and implement competent genetic algorithms—genetic algorithms that solve hard problems quickly, reliably, and accurately—and how the invention of competent genetic algorithms amounts to the creation of an effective computational theory of human innovation. For the specialist in genetic algorithms and evolutionary computation, this book combines over two decades of hard-won research results in a single volume to provide a comprehensive step-by-step guide to designing genetic algorithms that scale well with problem size and difficulty. For the innovation researcher – whether from the social and behavioral sciences, the natural sciences, the humanities, or the arts – this unique book gives a consistent and valuable mathematical and computational viewpoint for understanding certain aspects of human innovation. For all readers, The Design of Innovation provides an entrâe into the world of competent genetic algorithms and innovation through a methodology of invention borrowed from the Wright brothers. Combining careful decomposition, cost-effective, little analytical models, and careful design, the road to competence is paved with easily understood examples, simulations, and results from the literature.

A conceptual update of affordance theory that introduces the mechanisms and conditions framework, providing a vocabulary and critical perspective. Technological affordances mediate between the features of a technology and the outcomes of engagement with that technology. The concept of affordances, which migrated from psychology to design with Donald Norman's influential 1988 book, The Design of Everyday Things, offers a useful analytical tool in technology studies—but, Jenny Davis argues in How Artifacts Afford, it is in need of a conceptual update. Davis provides just such an update, introducing the mechanisms and conditions framework, which offers both a vocabulary and necessary critical perspective for affordance analyses. The mechanisms and conditions framework shifts the question from what objects afford to how objects afford, for whom, and under what circumstances. Davis shows that through this framework, analyses can account for the power and politics of technological artifacts. She situates the framework within a critical approach that views technology as materialised action. She explains how request, demand, encourage, discourage, refuse, and allow are mechanisms of affordance, and shows how these mechanisms take shape through variable conditions—perception, dexterity, and cultural and institutional legitimacy. Putting the framework into action, Davis identifies existing methodological approaches that complement it, including critical technological discourse analysis (CTDA), app feature analysis, and adversarial design. In today's rapidly changing sociotechnical landscape, the stakes of affordance analyses are high. Davis's mechanisms and conditions framework offers a timely theoretical reboot, providing tools for the crucial tasks of both analysis and design.
