it aims at achieving the objectives and it views organisation as an open system. Chester Barnard was the first person to utilize the systems approach in the field of management. He feels that the executive must steer through by keeping a balance between conflicting forces and events.

Open systems theory is a way of thinking about dynamic systems, or

systems that interact with their environments. All

businesses are dynamic systems, evolving and

changing in response to feedback. Open systems

theory is useful for

businesses because it

provides a framework for thinking about processes

Continuous and effective interaction of sub-systems helps to attain goals of the larger system.

Thus, every sub-system is a system and has sub-systems which together make an organisation a set of mutually dependent parts and their sub-parts.
