Now in its seventh edition, 'Digital Marketing' provides comprehensive, practical guidance on how companies can get the most out of digital media and technology to meet their marketing goals.

Questions concerning safety in aviation attract a great deal of attention, due to the growth in this industry and the number of fatal accidents in recent years. The aerospace industry has

always been deeply concerned with the permanent prevention of accidents and the conscientious safeguarding of all imaginable critical factors surrounding the organization of processes in aeronautical technology. However, the developments in aircraft technology and control systems require further improvements to meet future safety demands. This book embodies the proceedings of the 1997 International Aviation Safety Conference, and contains 60 talks by internationally recognized experts on various aspects of aviation safety. Subjects covered include: Human interfaces and man-machine interactions; Flight safety engineering and operational control systems; Aircraft development and integrated safety designs; Safety strategies relating to risk insurance and economics; Corporate aspects and safety

management factors --- including airlines services and airport security environment.

Examines how increasingly complicated computer technology has outpaced the ability of the average consumer to use it without frustration and calls for changes that will bring computer technology in line with how average people think

New Product Development presents a unique cross-discipline approach to new product development and goes further than most 'product design' books by drawing together the various strands that make up 'total design' now the accepted way to develop new products. The successful development of new products has become a complex process involving

contributions from a range of different disciplines. Rarely is one individual responsible for the inception, creation and realisation of a new product, for today the inherent complexity of products, markets and the processes through which they are developed dictates that a number of functions, each with their own roles, work together to create the product. This book presents a cross-discipline discussion of new product development, its organisation, its management, the key stages and key functions involved. Through the use of six major case studies and numerous mini-cases, the author demonstrates how a number of manufacturing companies have successfully illustrated separate elements into the new product development process. Extensive use of photographs Includes case studies of Rover, Flymo, Logitech and Polaroid

Provides a balanced overview of an often misunderstood process

The integration of technology in classrooms is rapidly emerging as a way to provide more educational opportunities for students. As virtual learning environments become more popular, evaluating the impact of this technology on student success is vital. Exploring the Effectiveness of Online Education in K-12 Environments combines empirical evidence and best practices in current K-12 distance learning and virtual schools. Emphasizing current research and opportunities, this book is an all-inclusive reference source for administrators, teachers, researchers, teacher educators, and policymakers interested in the development and

implementation of blended and electronic learning in primary and secondary education.

The task of design is to integrate functional requirements, contextual conditions and technological means into the creation of a work of architectural culture. After twenty years of practice, a team involving Ignacio Dahl Rocha, Kenneth Ross, Christian Leibbrand, Manuela Toscan and others of the Lausanne-based Swiss office of Richter ⏤ Dahl Rocha & Associés has undertaken to formulate the knowledge behind their architectural practice in a comprehensive manual. Covering the full span from initial design, building typology, technology to the cooperation with other professions in four extensive sections, this book conveys the concepts, methods

and details that constitute the tools of state-of-the-art architectural projects. The material used is completely first-hand, with the technical drawings redrawn to this purpose, coming from projects like the much-acclaimed integral renovation of Nestlé Headquarters, from residential, office and healthcare buildings to the groundbreaking Swiss Tech Convention Center on the Lausanne Polytechnic Campus. Written with the editorial collaboration of Denise Bratton, this book sets new standards for architectural publications as tools for design.

The first comprehensive guide to the petrography of geomaterials, making the petrographers specialist knowledge available to practitioners, educators and students worldwide

interested in modern and historic construction materials.

In his original CyberUnion, the author presented a bold plan for unions to develop a more significant role in the 21st century by adopting four strategic aids - futuristics, innovations, services, and traditions (F-I-S-T) - knit together by cutting-edge Info Tech resources. CyberUnions in Action expands on the F-I-S-T model and looks at gains and setbacks in pioneering efforts to create "CyberUnions". It highlights relevant websites, and features interviews with key CyberUnion advocates (and some critics). Shostak reviews overseas union efforts for transferable lessons, and pays special attention to the AFL-CIO campaign to ensure Labor's advances in the use of computer networks, the Internet,

wireless devices, and more.

This is the first practical guide that enables you to actually work with artificial neural networks on your personal computer. It provides basic information on neural networks, as well as the following special features: source code listings in C**actual case studies in a wide range of applications, including radar signal detection, stock market prediction, musical composition, ship pattern recognition, and biopotential waveform classification**CASE tools for neural networks and hybrid expert system/neural networks**practical hints and suggestions on when and how to use neural network tools to solve real-world problems.

In this how-to guide, practitioners at cultural heritage venues share their experiences in building sustainable relationships with their geographic and demographic communities. The volume includes practical discussions of activity types that museums can employ to build relationships with their communities including education, advocacy, co-creative, while serving as a community asset and resource. Case studies include direct application of successes and lessons learned with an emphasis on small to medium sized institutions with limited staff and budgets. Highlights include: Thematic discussions on topics such as building an advocacy network between the museum and community; developing cultural heritage institutions as critical and essential components of educational systems; museum response to

community expressed needs through a co-creative approach; the varied means for developing community members as cultural heritage stakeholders; and positioning the cultural heritage institution as an integral community asset. Twenty case studies directly apply the thematic discussions in small to medium-sized museum contexts. Extensive list of resources including digital links to forms, workbooks, and guides produced in the case studies. A list of national organizations and an extensive bibliography on community museum engagement. Specifically addressed to smaller institutions with limited budgets and limited or no full-time staff, the volume includes cost-effective projects that can be completed for $1,500 or less.
